

Planetary health resources

A society's well-being is directly connected to the stability of the environment. With evidence mounting of the damage of climate change to the planet, there is a growing sense of urgency for human beings to act quickly to ensure a stable future state for generations.

The library has selected a list of [resources on planetary health](#) including articles, guidelines, online and physical books, and websites. These cover many aspects such as changing patterns of vector-borne disease, mental distress as a consequence of climate change, sustainability in medical practice, heat response planning, and exercise prescription.

All reading lists from the library are available [here](#).

College registrants with library services may request literature searches on a planetary health-related topic or any other question via the [literature search web form](#) or medlib@cpsbc.ca.
