A **practice standard** reflects the minimum standard of professional behaviour and ethical conduct on a specific topic or issue expected by CPSBC of its licensees (all physicians and surgeons who practise medicine in British Columbia). Standards also reflect relevant legal requirements and are enforceable under the *Health Professions and Occupations Act, SBC 2022, c.43 (HPOA)* and the CPSBC Bylaws under the *HPOA*.

Preamble

This document is a practice standard of the Board of the College of Physicians and Surgeons of British Columbia (CPSBC).

CPSBC's position

Licensees who provide injections of botulinum toxin, dermal fillers or venous sclerotherapy must have completed relevant medical education and training prior to performing such procedures.

Licensees must either provide these injections themselves, or following assessment of the patient, they may order a nurse holding active licensing with the BC College of Nurses and Midwives (BCCNM) to perform the injection. No unlicensed person (such as a medical office assistant) may provide these injections. Licensees who allow unlicensed persons to provide these services under their direction may be subject to charges of unprofessional conduct. Licensees who order a nurse holding active licensing with BCCNM to provide these services must be aware of the extent of training and the ability of the nurse to perform the injections and meet the standard of care. At the time of the procedure, the ordering licensee or another licensee who has assumed responsibility must be present within the facility and immediately available for consultation.

Licensees are reminded to be aware of and comply with the [Advertising and Communication with the Public](#) practice standard.
